Hand Grenades

TAG-67

 Dimensions Ø67 X 92mm.	 Press. ACC. 120 dB.	 Weight 155g.	 Bundle 6 pcs.
--	---	--	---

The TAG-67 is a next-gen pyrotechnic MilSim device that replicates the iconic M67 hand grenade. This innovative design ensures safety and effectiveness during professional training scenarios. The TAG-67 easily fits in all standard pouches designed for M67 grenades. It is loaded with 6mm 0.20g BBs, offering reliable fragmentation with a radius of 10-12 meters. The new pyrotechnic system enhances safety without sacrificing performance, making it ideal for tactical simulations and realistic training exercises.

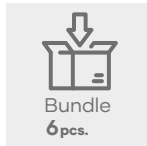

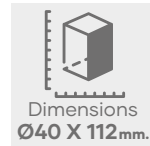

TAG-19

 Dimensions Ø64 X 120mm.	 Press. ACC. 120 dB.	 Weight 125g.	 Bundle 6 pcs.
---	---	--	---

This pyrotechnic hand grenade mimics the recognizable shape of the Russian RGD5 fragmentation grenade. Like the TAG-67, it contains multiple biodegradable BBs mixed with PEG to prevent rattling inside the durable polyurethane body. Our standard pyrotechnic component ensures a consistent and even distribution of fragments with a 10-12 meter radius. The design prioritizes both safety and performance, making it a reliable choice for tactical training and MilSim operations, where realism and effectiveness are key.

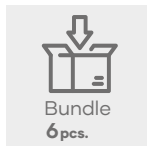

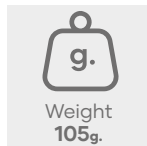

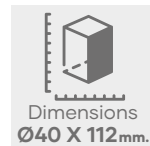

FBG-4 Flash Bang

The FBG-4 is a pyrotechnic stun hand grenade that aims to divert the enemy's attention or temporarily disable them, allowing for a breach without "killing" anyone in the room. It's ideal for "hostage rescue" training scenarios. This "Flash-bang" imitation grenade is suitable for indoor use and can be stored in standard 40mm ammo pouches, offering flexibility in close-quarters simulations.

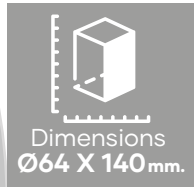

AFG-4

The AFG-4 is a pyrotechnic hand grenade filled with dried peas and constructed with a foamed polyurethane and cardboard body. It features a lower sound report and smaller dimensions, making it ideal for indoor use. The compact size allows easy storage in standard 40mm ammo pouches, providing versatility and practicality for training scenarios.

TAG-18 Smoke White

The TAG-18 smoke hand grenade is a faithful replica of the iconic US Army MK-18 in both appearance and functionality. It's filled with 140 grams of a non-toxic, movie-grade smoke-generating substance, ensuring safety while delivering a dense smoke output. The smoke is emitted from both ends of the grenade, significantly boosting the overall cloud density, making it highly effective for visual concealment or signaling. With dimensions of 64mm x 140mm and a total weight of 260g, the TAG-18 is compact yet powerful. Available in convenient 6-pack bundles for training or tactical simulations.

Launching Devices

TAG-ML 36

 t° exploit from -20° to +40°	 Caliber 36 mm.	 CO ₂ Propellant	 Weight 1050g.
---	---	---	--

The TAG-ML36 Grenade Launcher, featuring a rifled TAGinn barrel, is a shell-less launcher designed to fire TAGinn projectiles without the need for a launching shell. This is a joint project between TAGinn and «Madritsch Weapon Technology.» The TAG-ML36 is a pneumatic training system for the ML-40 launcher by «Madritsch WT.» It can be mounted on any 20mm under-barrel rail or a dedicated chassis. Powered by a 12g CO₂ cartridge, the TAG-ML36 can fire 8-10 consistent shots per cartridge.

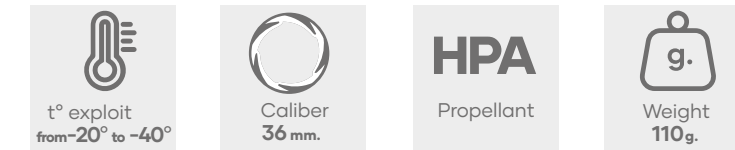

TAG-ML 36 HPA

The "Shell-HPA" is designed exclusively for high-pressure air use. It must be filled using a standard 850 PSI regulated HPA paintball tank and the upper part of the "FiSt-2." This device can launch projectiles as far as the shell-less TAG-ML36 grenade launcher upgraded with the HPA extension kit. Temperature and humidity no longer affect shot velocity or ballistics. The similar ballistics of the TAG-ML36 and "Shell-HPA" allow you to use the TAG-ML36 aiming device with other grenade launchers.

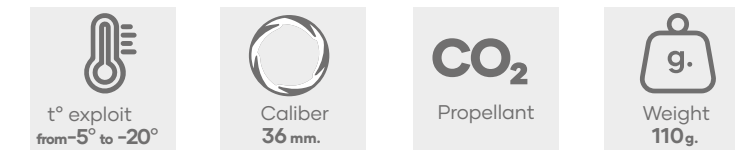

Shell HPA

"Shell-HPA" is for high pressure air use ONLY. It must be filled from the regular 850PSI regulated HPA paintball tank, using the upper part of the "FiSt-2". This device will throw the projectiles as far as our shell-less grenade launcher TAG-ML36 upgraded with HPA extension kit. The air temperature and humidity won't affect the velocity and ballistics of the shot anymore. The similar ballistics of TAG-ML36 launcher and "Shell-HPA" will allow you to use TAG-ML36 aiming device with any other grenade launchers.

Shell PRO EVO

The "Shell-PRO EVO" is designed exclusively for CO₂ gas use. Compared to the previous model, it's significantly shorter, making it much easier to use with grenade launchers like the M203. The plastic barrel has been upgraded to fit any grenade launcher's barrel perfectly. The sealing system has also been improved, allowing you to keep the "Shell-PRO EVO" under pressure all day without risking O-ring damage. Maintenance requirements are minimal, making this model virtually maintenance-free.

FiSt-2 Filling Station

The "FiSt-2" is the filling station for "Shell-HPA," "Shell-PRO EVO," and "Shell Multi-R." This redesigned adapter offers several key improvements. The new sealing method prevents O-ring damage during CO2 tank replacement, even if pressure remains. It eliminates leaks between the nozzle and valve, even in cold weather. The tempered stainless steel nozzle ensures a perfect fit, reducing pressure loss. Compatible with both CO2 and HPA, the adapter has no pressure left after filling, allowing easy removal without degassing.

Cases

12 reusable casings in a plastic bag. These reusable cases are essential for firing TAGinn projectiles from the TAG-ML36 grenade launcher. After each shot, you'll need to remove the casing, just as you would with a real grenade launcher. These casings are designed for repeated use, but during games or training, you may lose a few. No worries—additional reusable cases are available for purchase at a low price, ensuring you always have enough to continue your training or simulation.

HPA CHARGER

HPA charger is an adaptor, which allows you to fill our HPA-compatible launching shells. You may use it with our «Shell Multi-R», «Shell-HPA», or any other HPA device with similar construction.

Projectiles for launching devices

An unbelievable product that transforms duty or training into a truly realistic experience, while maintaining all necessary safety measures. Its smart design allows you to aim and shoot with a high level of accuracy. Select from a variety of launching projectiles to meet your specific needs. Made of lightweight foam, these projectiles meet all safety requirements, ensuring both effectiveness and safety. Whether you're training force-on-force or using the system as a preliminary tool for riot control, this product provides a real-life experience that enhances training realism without compromising safety.

Reaper MK2 3.5

This projectile is a pyrotechnic, commercially manufactured device that elevates your game or training to a new level. Made from trauma-safe, lightweight polyurethane foam, the "Reaper" now features a soft PU tip for added safety. Its incredible accuracy comes from the spinning motion during flight, stabilizing the grenade until initiation, which occurs 3.5 seconds after launch—covering a distance of about 130 meters. This balance of safety and precision makes the "Reaper" perfect for realistic game or training scenarios.

Reaper MK2 5.0

This version of the «Reaper» pyrotechnic projectile is designed with a longer initiation time compared to the 3.5-second model. It activates 5 seconds after launch, extending its range to approximately 180 meters, making it ideal for scenarios requiring greater distance. Like the 3.5s model, it's made from trauma-safe, lightweight polyurethane foam and features a soft PU tip for added safety. Its spinning motion during flight ensures stability, providing the same exceptional accuracy and reliability in game or training environments.

PALADIN

MK2

The "Paladin" non-pyrotechnic marking projectile is compatible with all TAGinn launching devices, including the TAGML36 launcher. Filled with non-toxic, food-grade powder that is easy to wash off, it's designed for safety and precision. Upon impact, the thin shell cracks, releasing powder to visibly mark the surface. The "Paladin" is perfect for use in anti-vehicle simulations, as it leaves a bright mark without causing any damage to the vehicle. This makes it ideal for training scenarios where marking hits is crucial, providing a realistic yet safe experience.

FATE MK2

This projectile detonates on impact or 5 seconds after being fired if the target is missed. It offers a 2-in-1 capability, giving you the flexibility to make fast decisions in the field—whether to hit a vehicle, shoot through a window, or clear a trench. Its design allows for versatile use in various tactical scenarios, enhancing both training and mission-simulations with added realism and dynamic options.

PECKER MK2 Dummy

The M203 offers inherent accuracy, allowing grenades to be placed into windows at 90 meters and bunker apertures at 50 meters. However, these ranges decrease as the angle of obliquity increases. Combat experience shows that M203 gunners struggle to consistently hit windows at 50 meters when aiming and firing quickly. Sharpen your skills with the «Pecker» dummy projectile, designed to enhance training and improve accuracy in real-world scenarios.

VELUM MK2 Smoke White

The "Velum MK2" is fast, accurate, and produces a dense smoke cloud. It is compatible with all our launching devices, including the TAG-ML36. Mark waypoints, deploy smokescreens, or blind opponents at distances over 150 meters—it's your decision, and now you can do it instantly. The "Velum" comes in a bundle of 10 individual projectiles. Use them strategically, and your squad will gain a decisive advantage in any scenario.

Master Key

The TAGinn "Master Key" round for the ML36 is a buckshot round filled with approximately 75 BBs. It offers effective performance in close-quarters game or training environments when used with your TAG-ML36 launcher. With an effective range of 30 meters, this round provides the necessary impact for tactical situations. Designed to be disposable after use, the "Master Key" is a practical and efficient solution for various game or training scenarios.

Apparel & Textile

**Single hand
grenade pouch**

This pouch is compatible with the entire line of TAGinn grenades. It is designed to be used with Velcro for a faster pull, or with a "Fastex" lock for the silent deployment. The special lids cover the Velcro surface to avoid noise during opening.

**Double hand
grenade pouch**

This pouch is compatible with the entire line of TAGinn grenades. It is designed to be used with Velcro for the faster pull, or with a "Fastex" lock for the silent deployment. The special lids cover the Velcro surface to avoid a noise during opening.

Battle pouch

This is universal carry pouch for the full range of TAGinn ammo and «Launching shells». You can store up to 8 projectiles and/or shells in this pouch, plus the filling station and 12g CO2 gas cartridges. The smart design enables you to fill up and use your ammo in the most comfortable and fastest way possible.

**TAGsling
Flexi Belt**

This magnet-locking flexible waist belt is the comfortable solution to keep your pants in their place. It won't restrict you either while driving, crawling. In order to lock the belt, you simply set both parts of the buckle together, and the magnet will do the rest. The TAGinn Flexi-Belt may be used as an everyday accessory, or as a tactical belt. Despite the fact that the belt is flexible, you may put all your regular tactical loadout exactly like on any other tactical belts.

TAGsling «RUSH»

«Rush» is the advanced sling with wide range of positions and ways of use. «Rush» has an ability to be transformed from 3 point position to 1 point position and back within the moment. It is good for use with any assault, hunting, sniper, or pump action rifles.

TAGsling «PRO»

This sling has the same abilities as the «Rush» sling, but also may be used in few more ways. «PRO» is good for ANY types of medium/long barrel, or heavy personal weapons. It might be easily transformed from 3-point sling to an adjustable 2-point or fixed 2-point sling. You may carry your weapon in a «Backpack « style, like the biatlon athletes.

Mounting Loop

Mounting Loop is for the front, back, or both sides mounting solution for most of the guns. Ultimate for sniper rifles, AK and M4 series, MGL, pump action, and machine guns.

TAGsling «1 POINT»

TAGinn Slings are an innovative products which opening the whole new horizons and techniques of using your weapon. TAGinn «1Point» sling is the simple but very useful sling. It is good for use with any Sub Machine Gun, or our TAG-ML36 stand-alone version.

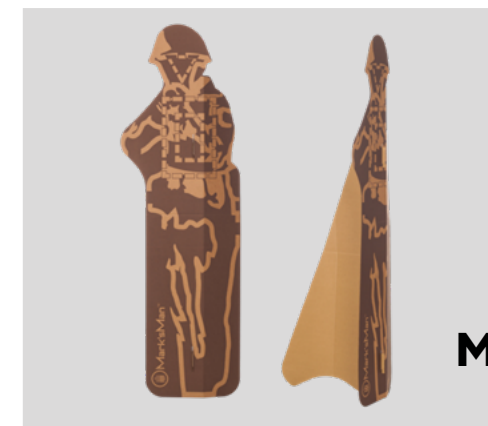

Comfort Pad

Comfort Pad will upgrade any gun sling. Its construction allowing to install and remove the pad within seconds. It wears tight and stays steady on the sling.

You can pick any available color using the options.

Mark'sMan Targets

This foldable human-size target made of 3mm cardboard. It is an ultimate tool for training with both - real firearms, and simulation weapons. Package bundle: 160cm human size target, Attachable support, User manual, Result table, Hits reset stickers.

T-SHIRTS

TAGinn T-Shirts are high-quality clothing made with discharge printing, combining 92% soft cotton and 8% spandex for optimal comfort in any weather. These shirts are designed to provide a comfortable fit, flexibility, and durability, making them ideal for both casual wear and active use. Available in a variety of fun and stylish designs, TAGinn T-Shirts allow you to express your individuality while enjoying the perfect balance of comfort and style. Whether for training, everyday use, or showing off your unique style, these shirts are a great choice.

Hoodie

TAGinn Hoodies offer premium quality and comfort, featuring discharge printing on a blend of soft cotton and fleece. Designed to keep you warm in cooler weather while remaining breathable for active use, these hoodies provide a cozy, durable fit. Available in a single stylish design with the TAGinn logo, they proudly display your connection to the brand. Perfect for training, casual wear, or staying warm outdoors, TAGinn Hoodies combine functionality with a sleek design that reflects your affiliation with TAGinn.
